## SUMMARY

Software developer building production HRMS, biometric attendance, and automation systems across React, Node.js, and SQL/NoSQL databases. Owns technical proposals, deployment pipelines, and third-party hardware integrations for MSME clients, translating business requirements into working, deployed code rather than prototypes.

## TECHNICAL SKILLS

**Languages:** Java, Python, JavaScript, HTML, CSS

**Frameworks & Libraries:** React.js, Node.js, Express.js, REST APIs, face-api.js

**Databases:** MongoDB, MySQL, PostgreSQL (Supabase)

**Tools & Platforms:** Git, GitHub, VS Code, Linux CLI, Supabase, Hostinger VPS, eSSL biometric devices

## EXPERIENCE

### Software Developer — AJ Solutions

*Apr 2026 – Present*

- Architected a 16-module HRMS on a React frontend and Node.js/Express backend, drafting a ₹3,00,500 technical proposal spanning payroll, attendance, and appraisal workflows.
- Quantified a 392-hour build-vs-buy analysis comparing a custom Node.js stack against Zoho People, modelling licensing, customization, and long-term maintenance costs.
- Configured REST endpoints, database schemas, and VPS deployments across 3 concurrent products — HRMS, wastage tracker, maintenance app — as sole engineer on each.
- Debugged schema migrations, third-party API failures, and scope changes directly with clients, keeping each build on schedule.

### Frontend Developer Intern — VEntityData Technologies

*Sep 2025 – Mar 2026*

- Structured ReactJS component hierarchies with lazy-loaded routes and memoized state, cutting unnecessary re-renders in production builds.
- Shipped 3 AI-driven modules — Resume Builder, AI Assessment engine, AI Interview simulator — wiring frontend forms to backend REST APIs.
- Added JSON-LD structured schema markup and semantic HTML, lifting search indexing and crawlability.
- Handled asynchronous data fetching and form validation for a healthcare client's responsive UI.

## PROJECTS

### Human Resource Management System — Annapoorna Mithai —

*Apr 2026*

- Modelled payroll, biometric attendance, and appraisal schemas on Supabase (PostgreSQL), syncing data across modules in real time.
- Connected eSSL biometric hardware through a custom Node.js relay hosted on a Hostinger VPS, streaming punch events into the database.
- Trained a face recognition attendance pipeline with face-api.js, capturing webcam frames and matching facial embeddings client-side.
- Mapped a leave management module across 4 employee segments (Operations/Corporate × Resident/Non-Resident), coding distinct accrual and approval logic per segment.
- Audited planned vs. shipped feature sets, patching cross-module data dependency conflicts before handover.

### Energy and Wastage Tracking System —

*Nov 2024*

- Piped sensor and manual-entry data through a MySQL-backed capture-to-dashboard pipeline for an MSME client, surfacing wastage and energy metrics for cost-reduction decisions.

## EDUCATION

### B.Tech in Computer Science (AI & Robotics) — VIT, Chennai

*Sep 2021 – Apr 2025*

CGPA: 7.22 | Coursework: Data Structures & Algorithms, DBMS, Embedded Systems, Design & Analysis of Algorithms

### Adhyapana School, CBSE

Class X: 78.6% | Class XII: 78.6%
